INSTALLING SOLAX PV INVERTER WITHIN SOUTH AUSTRALIA RELEVANT AGENT INSTRUCTIONS
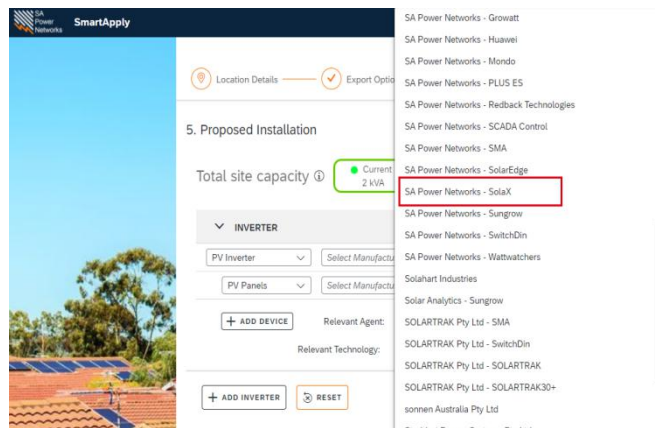

Dear SolaX Power PV Inverter Installer,

Introduction

Within the state of South Australia, the Energy and Technical Regulation, part of the Department for Energy and Mining, is a mandatory requirement that inverters can be remotely disconnected and reconnected to ensure grid stability. Further information can be found on the SAPN Smarter Home Program or by emailing the Department for Energy and Mining on otr.smarterhomes@sa.gov.au.

The purpose of this document is to ensure that you, the Installer of a SolaX Power PV Inverter, are aware of the requirements for the SA remote disconnection and reconnect and provide a procedure on how to fulfil these requirements when installing a SolaX Power PV Inverter.

SAPN Embedded Generation Smart Apply

As a solar installer in South Australia, you are aware of the SAPN Embedded Generation SmartApply platform. When making the application, please select "SA Power Networks- Solax" as a relevant agent for the SolaX PV inverter.

SolaX Installation and Registration

When installing a SolaX Power PV Inverter, you are required to:

1. Install the meter/CT supplied by SolaX Power for installations that require flexible export control;
2. Registration of customer account in SolaX Could Monitoring Platform and connect the inverter to home WIFI for end-users using Pocket WiFi/Lan V2.0;
3. Close out the installation with SA Power Networks using SmartInstall;
4. Report a list of new connections (NMI and corresponding WIFI dongle registration number or inverter serial numbers) to support@solaxpower.com.au within 7 days of installing the SolaX Power PV Inverter.

* The WIFI dongle registration number/inverter serial number can be found on the installed WIFI dongle/left-hand side of the installed inverter.

Thank you for your understanding and cooperation. Please don't hesitate to contact us if you have any questions.
