

How do I check export options available for my site?

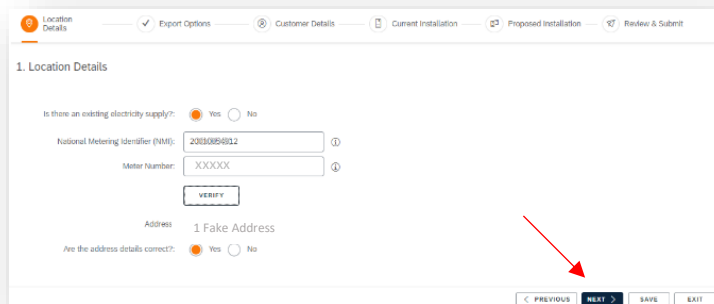

1. Click the “Create new application” button on the dashboard

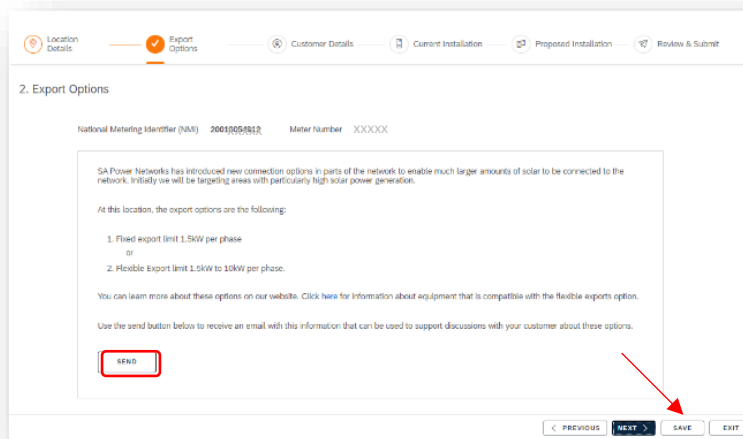

2. Enter the NMI and Meter number for the site, then click verify to check the address

3. The address is displayed. Click Next if the address is correct

4. The export options available are displayed. If more than one option is available, click the “send” button to receive information by email, then click “save” so you can continue the application once your customer decides on an option

5. If only one option is displayed, click “next” to continue, use the guide “Create an application”
