

About the Portal

SA Power Networks provides a portal for embedded generation applications. This is part of our ongoing improvements. Future enhancements will continue. You will need to register (once off) for access to the portal. The [home tab in the portal](#) provides dashboard views of your information.

For Applicants

Create your applications through [the requests tab in the portal](#). You can save a draft and continue later, until you are ready to submit it. Instant auto approval is available for small embedded generation applications.

For Installers

You must close out your installation using [the installations tab in the portal](#). The form is easy to follow and prefills detailed information from the standards for you, which can be amended if required. You must ensure the device is registered and complete the capability test for flexible export sites.

For Solar Customers on Flexible Export Limits

You have the option to monitor your solar usage, consumption, and export as well as your flexible limits using [the insights tab in the portal](#). If you sign up for this portal you will also receive curtesy notifications if your exports to the grid are lower than expected, which will allow you to verify your internet connectivity in conjunction with your solar inverter.

You will receive an invitation to register for this system after your solar has been installed, existing users will receive the invitation as this feature is rolled out.

More information

User guides can be found on the [SA Power Networks website here](#).
