

SmartSA Insights –Overview

SmartSA Insights is an app that SA Power Networks provides to customers who are taking advantage of the Flexible Exports option, which is an initiative that aims to maximise customer’s export capacity whilst ensuring the security of the grid.

SmartSA Insights allows you to:

- Monitor solar system export, usage, performance, and grid consumption for properties that you own
- Monitor the solar systems for someone else’s property if you are granted permission to do so by the owner. This could be useful, for example, for people who may be managing a property on behalf of their elderly parents.
- Allow someone else to monitor your solar system on your behalf for your property

As of late 2023 you will receive an invitation and a link to register for SmartSA insights.

Alternatively, you can register using [this link here](#) or use this QR code
