**RE: NER cl 5.13A(b)(2) – Statement of excluded zone substations due to confidentiality**

In accordance with clause 5.13A(b)(2) of the National Electricity Rules, SA Power Networks is required to disclose those zone substations which have been excluded from its zone substation dataset on the basis of confidentiality.

The table below lists those zone substations and the SA Power Networks' region in which they reside. Each site represents a zone substation which supplies a single customer and therefore contains confidential information pertaining to that specific customer.

Any other zone substations listed within SA Power Networks' Distribution Annual Planning Report (DAPR) for which data is not contained within the published dataset represent those sites for which SCADA data is unavailable.
