

ENGINEERING VACATION PROGRAM

# Empower yourself

As South Australia's electricity distributor we have a crucial and exciting role in delivering power for our community.

We offer award-winning training and development, and a safe and encouraging work environment where we recognise achievement.

Our Engineering Vacation Program will ensure you get the experience you need to develop an exciting career.

[sapowernetworks.com.au/careers](https://sapowernetworks.com.au/careers)

As the State's electricity distributor, SA Power Networks is at the centre of an energy revolution.

We're incorporating renewable energy sources with sophisticated distribution network systems and technology so customers can generate, share or use electricity when, where and how they want.

Shaping the future of energy distribution means we have exciting and challenging career opportunities for graduates, and we're looking for talented and innovative people to help continue our leadership in energy services.

### **What's on offer?**

The Engineering Vacation Program provides an opportunity for you to put theory into practice. Our program is aimed at enthusiastic and energetic students in their penultimate year of study who have an interest in electrical power systems. The program spans approximately 12 weeks over the summer university break.

### **Build your knowledge and gain hands-on experience**

The Program is designed to help you build your knowledge and increase your hands-on experience. Over the course of the program you will work on electrical power engineering projects — a fantastic way of applying what you're learning at uni to real-life situations.

### **Increase your business networks**

During your time, you will have access to experienced mentors and coaches who will help build your business networks, knowledge and skills. Our employees are committed to making your time in the business diverse and interesting so you can consider your long-term career options.

### **Development opportunities**

This program will give you an opportunity to experience challenging and practical work supported by experienced SA Power Networks employees.

### **The electricity industry is an exciting and dynamic place to work**

Electricity is the life blood of our community. But the way we make and use our electricity is changing and that's providing exciting new career opportunities in the energy sector.

We play a vital role in ensuring adequate electricity infrastructure is in place for our State now, but also that our network adapts as we increase investment in renewable energy sources.

### **What are the benefits?**

Taking part in the SA Power Networks Engineering Vacation Program is a great way to:

- gain real life experience in a professional working environment
- build your skills, knowledge and business networks
- 'test drive' your potential profession
- get paid to have a great experience!

### **Who are we looking for?**

We are continually looking for talented and energetic individuals to join our organisation. We accept applicants from the following disciplines:

- Electrical/Electronic Engineering
- Mechatronic Engineering
- Civil/Structural Engineering.

### **Eligibility**

Must be an Australian Citizen or hold an Australian Permanent Residence Visa.
